New claim 1

1. A motor vehicle comprising at least one electric motor, an energy storage device for providing drive energy for the electric motor, a plug connector connected to the energy storage device for connection to a current source and a control means for controlling the flow of current through the current source and the energy storage device, wherein the control means permits a flow of current from the energy storage device to the current source, and the control means includes a device for detecting the amount of charge in the energy storage means and interrupts the flow of current from the energy storage device to the network when a predeterminable threshold value of the remaining residual charge amount is reached.
